Common Topics and Sample Questions with Answers

1. Ecosystems and Living Organisms

Question: What are the main components of an ecosystem?

Answer:

An ecosystem consists of two main components:

- Biotic factors: Living parts such as plants, animals, fungi, and microorganisms.
- Abiotic factors: Non-living parts such as sunlight, water, air, soil, and temperature.

Explanation:

These components interact to form a balanced environment. For example, plants (biotic) need

sunlight and water (abiotic) to grow, while animals rely on plants and other animals for food.

2. Properties of Matter

Question: What is the difference between solids, liquids, and gases?

Answer:

- Solids: Have a fixed shape and volume. Particles are tightly packed and only vibrate in place.
- Liquids: Have a fixed volume but take the shape of their container. Particles are close but can slide past each other.
- Gases: Have neither fixed shape nor volume. Particles are far apart and move freely.

Explanation:

Understanding these states helps explain phenomena like melting, boiling, and condensation.

3. Energy and Motion

Question: How does energy transfer in a simple machine like a lever?

Answer:

A lever transfers energy by multiplying force. When you apply force to one end, it generates a larger force at the other end to move an object. The lever's fulcrum (pivot point) determines the mechanical advantage.

Key Points:

- Applying less force over a greater distance can move heavier loads.
- The position of the fulcrum affects the effort needed.

4. Earth's Systems and Weather

Question: What causes seasons on Earth?

Answer:

Seasons are caused by the tilt of Earth's axis relative to its orbit around the Sun. As Earth orbits,

different hemispheres tilt toward or away from the Sun, leading to variations in sunlight and temperature.

Explanation:

- When the North Hemisphere tilts toward the Sun, it experiences summer.
- When it tilts away, it experiences winter.
- The tilt also causes spring and fall as the Sun's position changes.

5. Human Body Systems

Question: What is the function of the respiratory system?

Answer:

The respiratory system is responsible for taking in oxygen and releasing carbon dioxide. It includes the lungs, trachea, bronchi, and diaphragm.

Details:

- Air enters through the nose or mouth.
- It travels down the trachea into the lungs.
- Oxygen diffuses into the blood, and carbon dioxide is expelled during exhalation.
